

Motorola 9501 Pager

The pager can be used as a stand-alone device, or as a follow-me pager. In the latter case, it will notify the Iridium subscriber that someone is trying to reach him/her (by phone or Voice-mail) and could not because the phone was either turned off or did not have a clear view of the sky. The pager, although made with the satellite technology, does not need to have a clear view of the sky, and has a very good in-building penetration. The low consumption of the unique battery (AA standard format) make it a device always on (30-days life average), able to read SMS Iridium e-mail message, at no cost (in some service plans) for either the sender or the receiver of the message.

What is it?

Motorola's lightweight, wearable Satellite Series (TM) 9501 Pager, combined with the 9505 or the 9500 Portable Phone, offers one of the world's most extensive global wireless personal communication networks.

Why do you need it?

When you can't be out of reach, the Satellite Series (TM) 9501 Pager by Motorola receives all your messages, wherever your travels take you. This belt-worn pager offers a flexible, cost-effective global communications package for unlimited mobility.
